

The background of the entire image is a dense, chaotic pattern of thin, overlapping lines in two colors: a dark blue and a golden-yellow. These lines are tangled and looped, creating a complex, web-like texture that frames the central text.

The friction in your workflow is costing you more than just time.

Every day, professionals face a stream of repetitive tasks: finding code elements, filling out forms, running manual checks, and proofreading documents. These small moments of friction add up, draining focus and slowing down progress.

There is a smarter way to work.

Introducing Browser Extensions.

A browser extension is a lightweight add-on that enhances or modifies the behavior of a web browser.

- Runs **inside the browser**, not the operating system.

- **Interacts directly with web pages** you use every day.

- **Automates repetitive browser tasks** to reclaim your focus.

A Universe of Tools for Any Task.

Browser extensions are more than just a single tool; they are a category of solutions tailored to specific professional needs.

For Developers

XPath Finders (e.g., Ruto)

For Testers

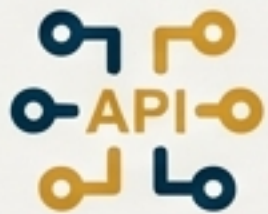

Form Fillers

For Anyone

JSON Formatters

For Developers (cont.)

(...and many more)

For Testers (cont.)

Accessibility Checkers

For Anyone (cont.)

AI-powered Grammar Checkers

From Theory to Transformation.

See how four professionals, facing unique daily challenges, used a simple browser extension to fundamentally change how they work.

Simi

Veera

Vikas

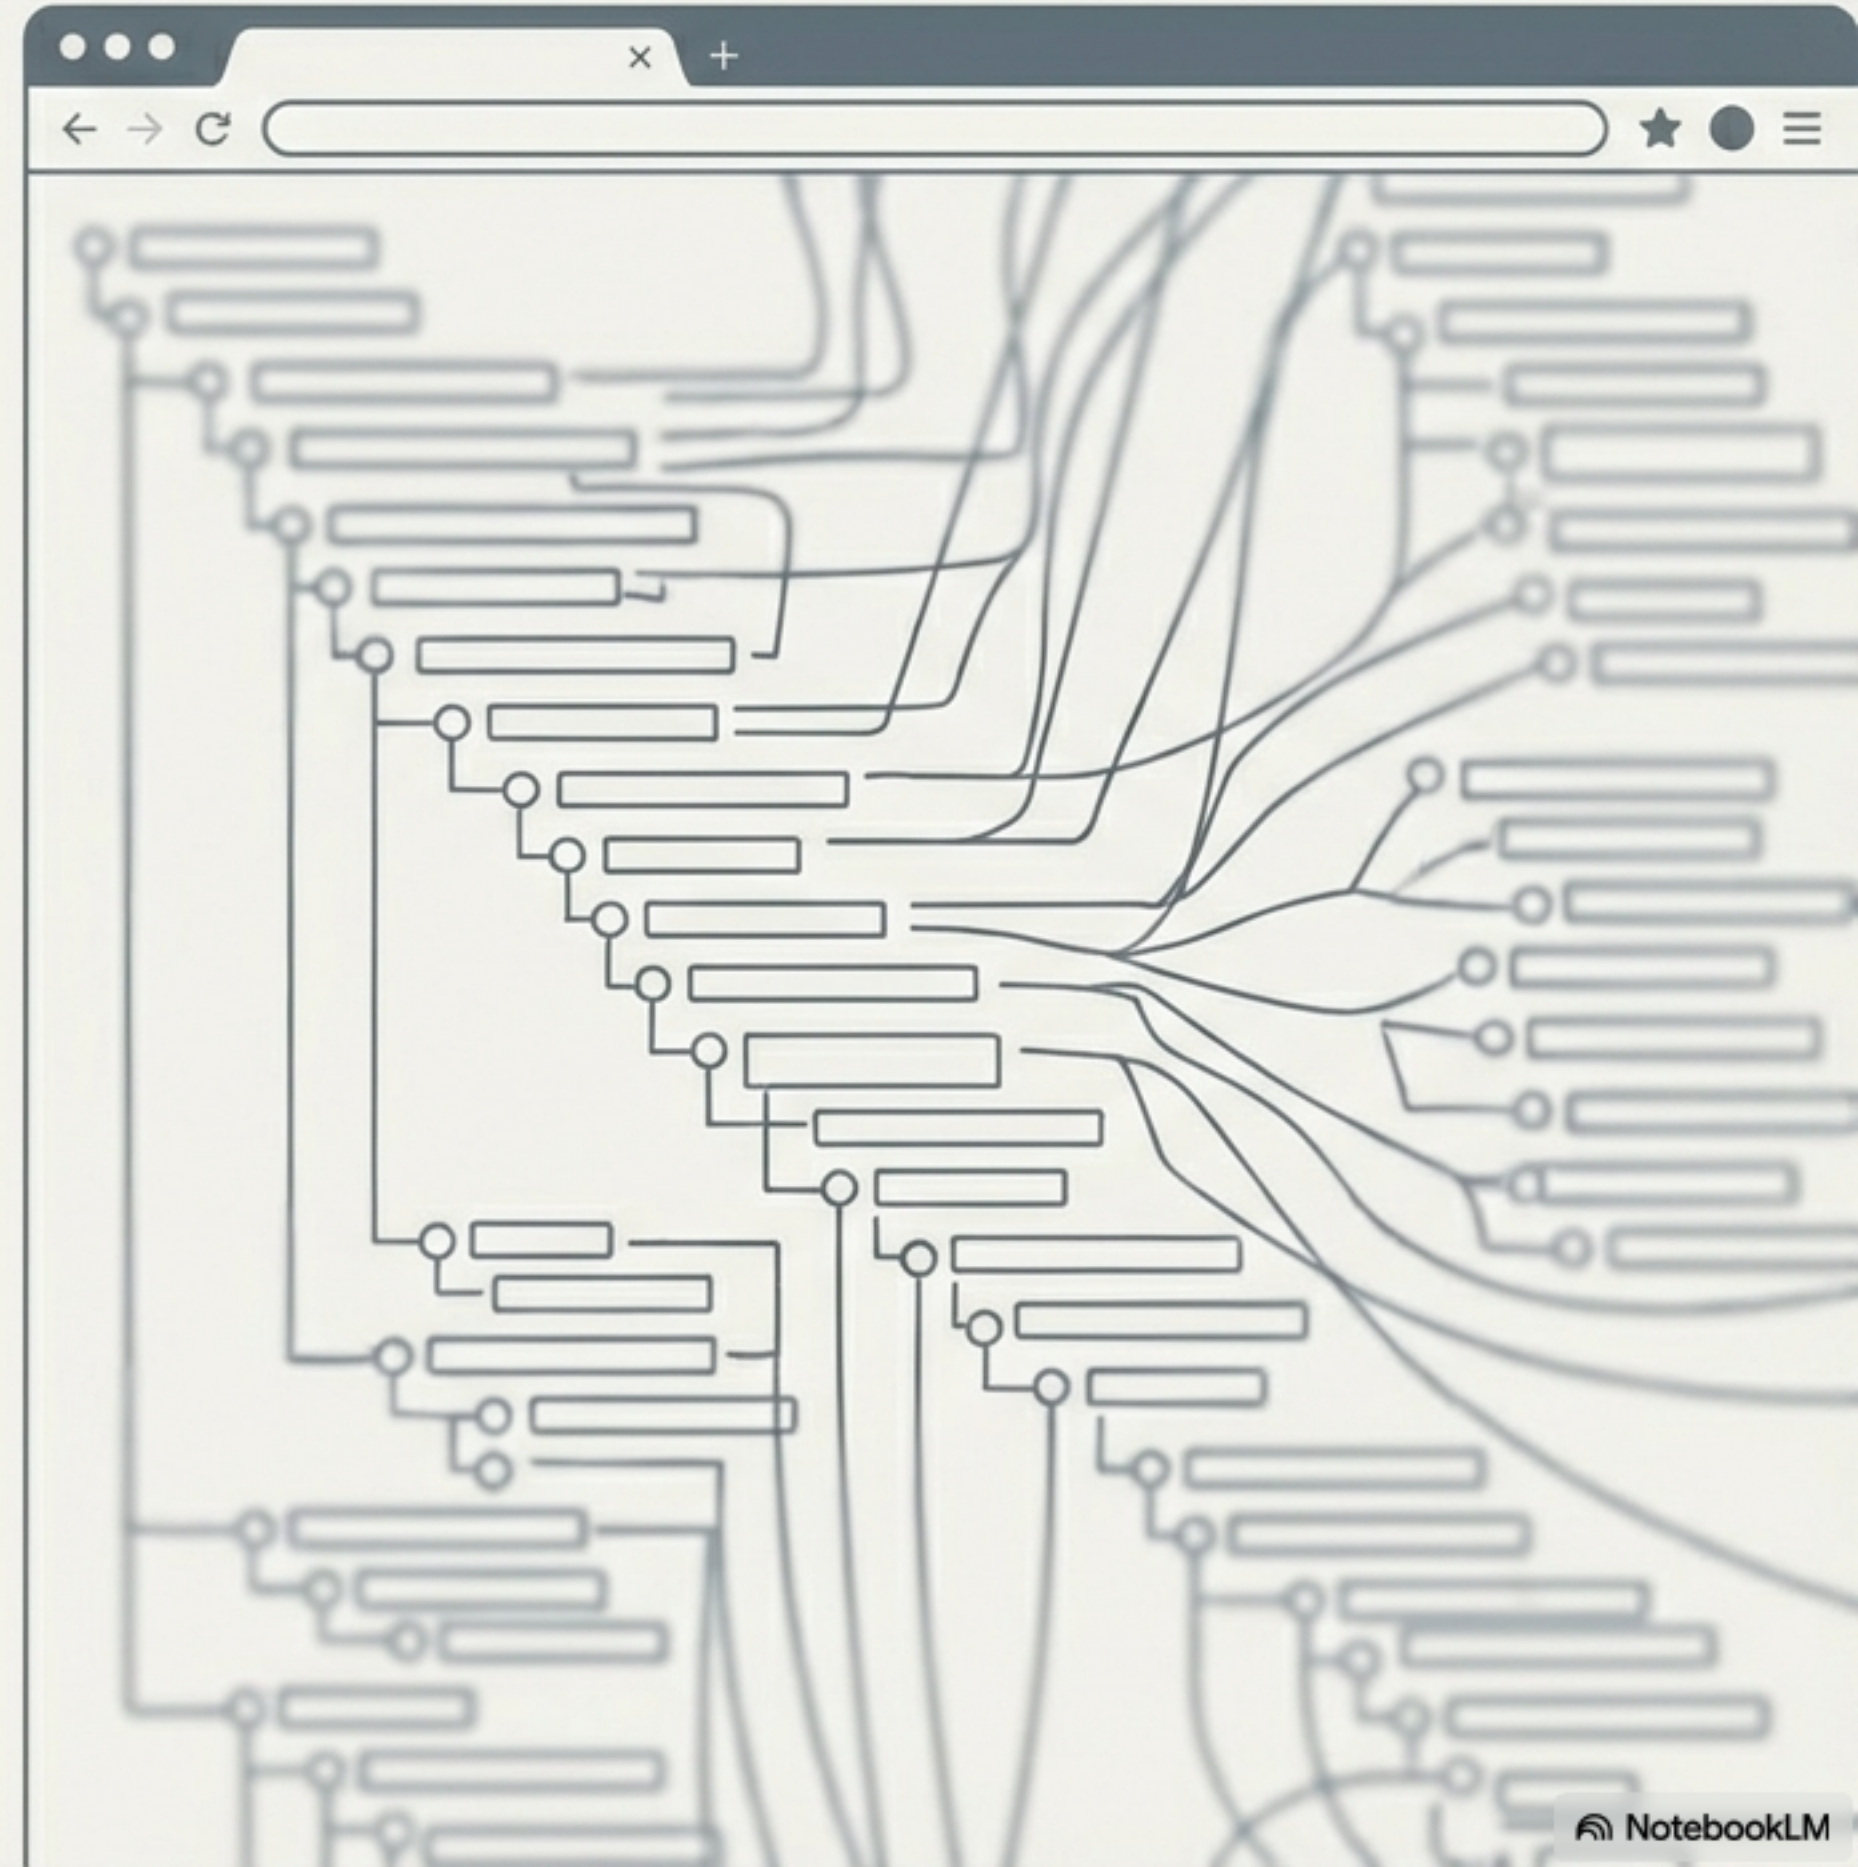

Jessy

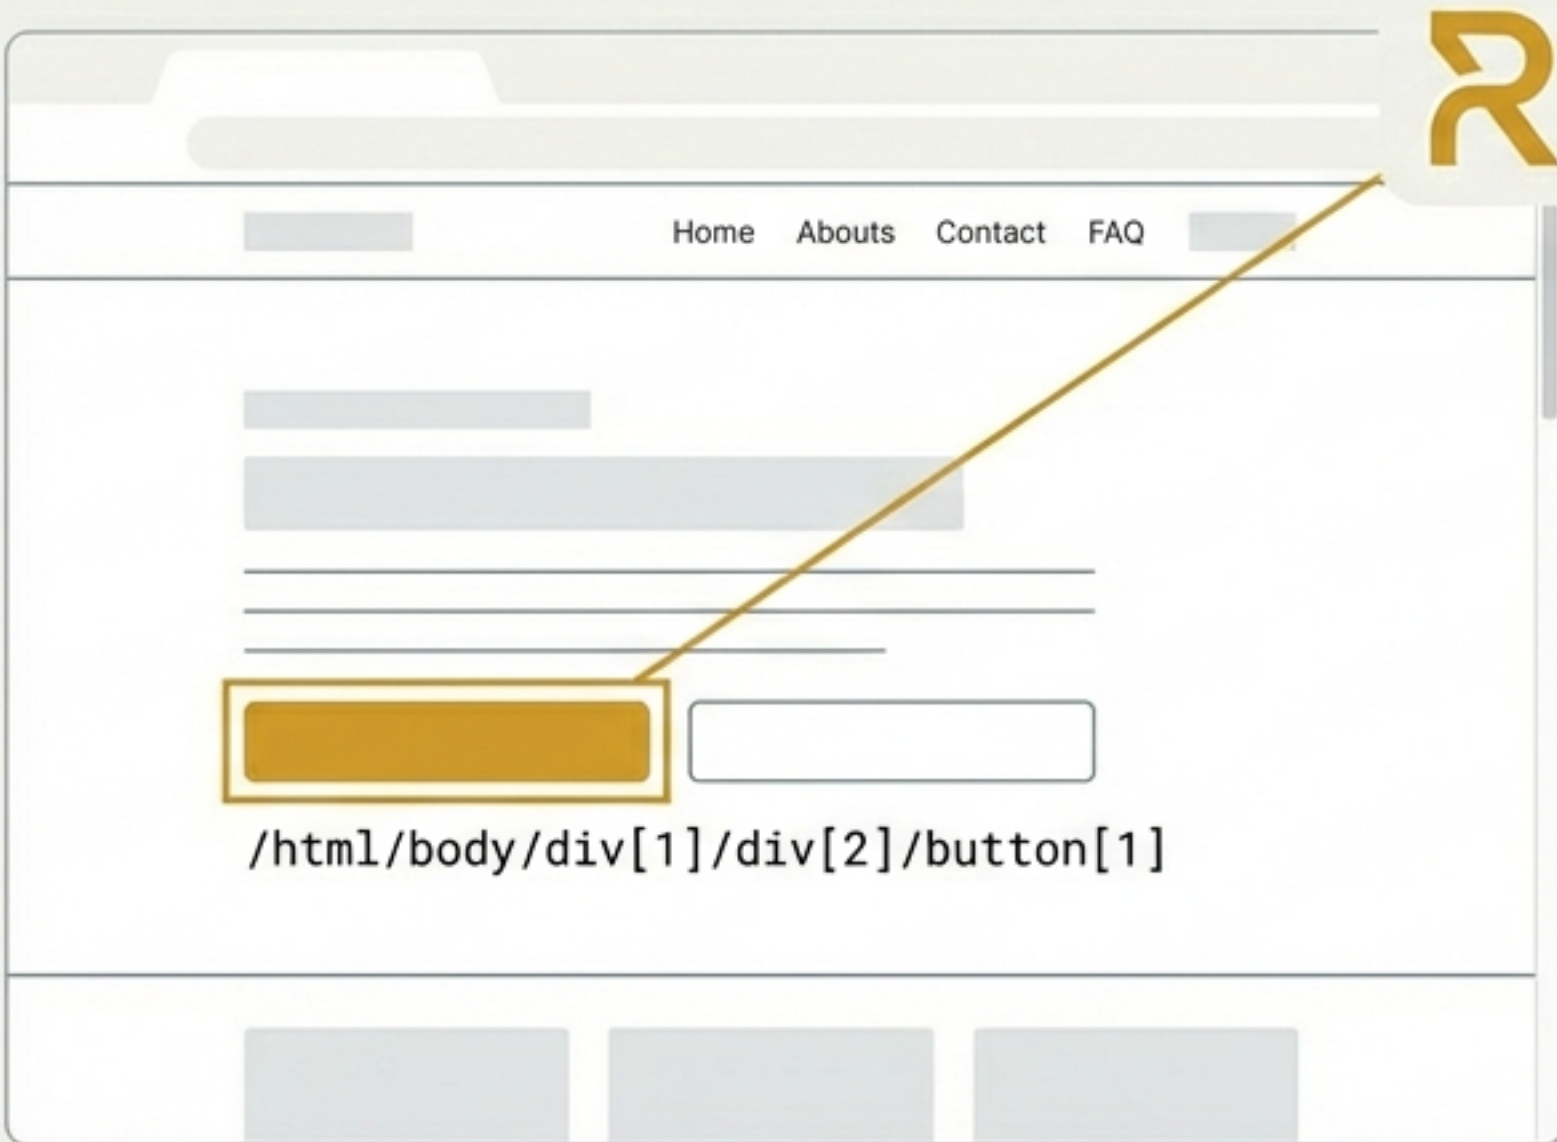

Meet Simi, Automation Engineer.

The Challenge: Identifying the right XPath.

Simi is an Automation Engineer developing selenium java automation scripts. She finds difficulty in identifying the XPath using Dev tools (Elements Tab).

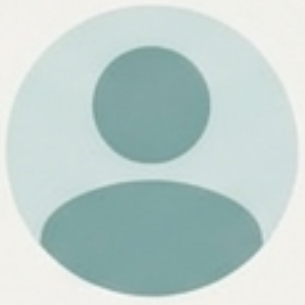

From Frustration to Flow.

Simi Started using Ruto the XPath finder.

Now she is able to get the XPath for Automation scripts **in less time.**

Meet Veera, Application Tester

The Challenge: Repetitive,
high-volume data entry

Veera is testing an application with a
registration form having 30 Fields. For each
and every test case, Veera needs to fill these
fields manually. This is a time-consuming
and repetitive task.

Reclaiming Hours from Repetitive Work.

Veera found an alternative: the 'Fake Data' browser extension, a form filler.

She can now instantly **fill the fields and proceed with testing**, eliminating the manual bottleneck in her workflow.

Meet Vikas, New to Accessibility Testing

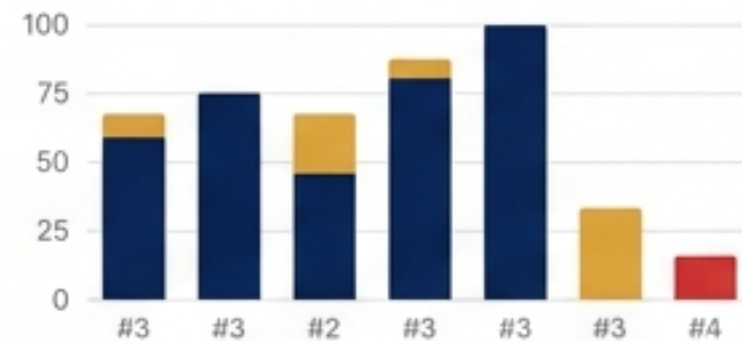

The Challenge: Navigating complex compliance standards

Vikas, being a newbie to accessibility testing, doesn't know completely about the WCAG (Web Content Accessibility Guidelines) and needs to test an application for accessibility.

Accessibility Report: ARC Toolkit

Contrast Errors

18 Passed, 2 Warnings

3 Failed

ARIA Attributes

✓ Landmarks & Headings	Language Landmarks & Headings.
✓ Focus Order	Headings in accessibility in a further.
✓ Focus Order	Cross topology of the complex.
✓ User Process	Generate accessibility in audience.
⚠ Missing alt text	Missing alt text to navigation.
⚠ Redundant titles	Redundant titles include information.

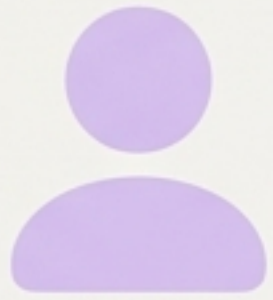

Gaining Insight and Generating Impact

The Solution

Vikas used the 'ARC Toolkit' browser extension for accessibility testing.

The Outcome

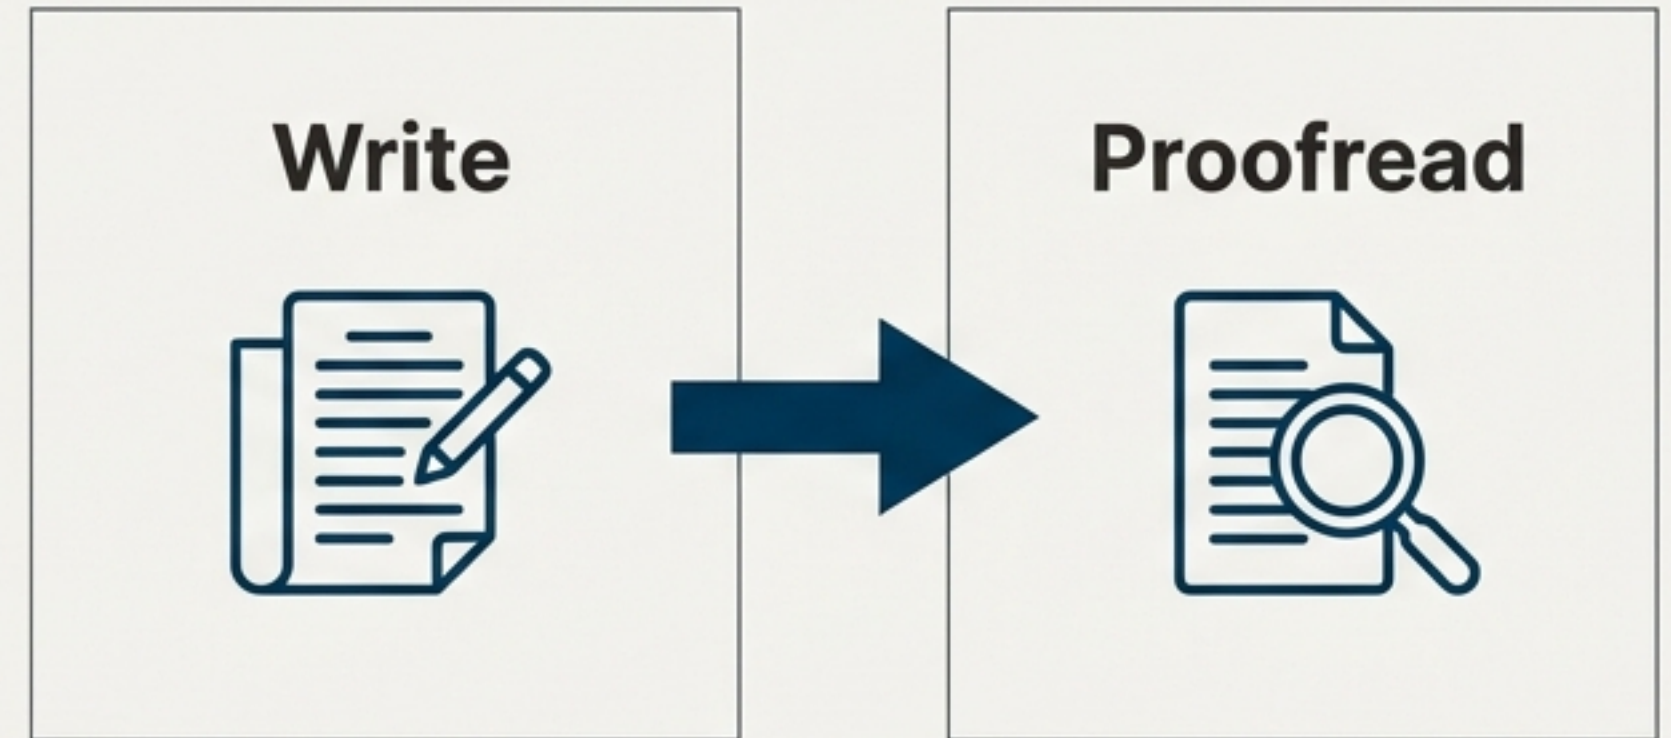

The tool allows him to **generate accessibility reports and also understand the core accessibility functionalities**, turning a complex task into a structured, learnable process.

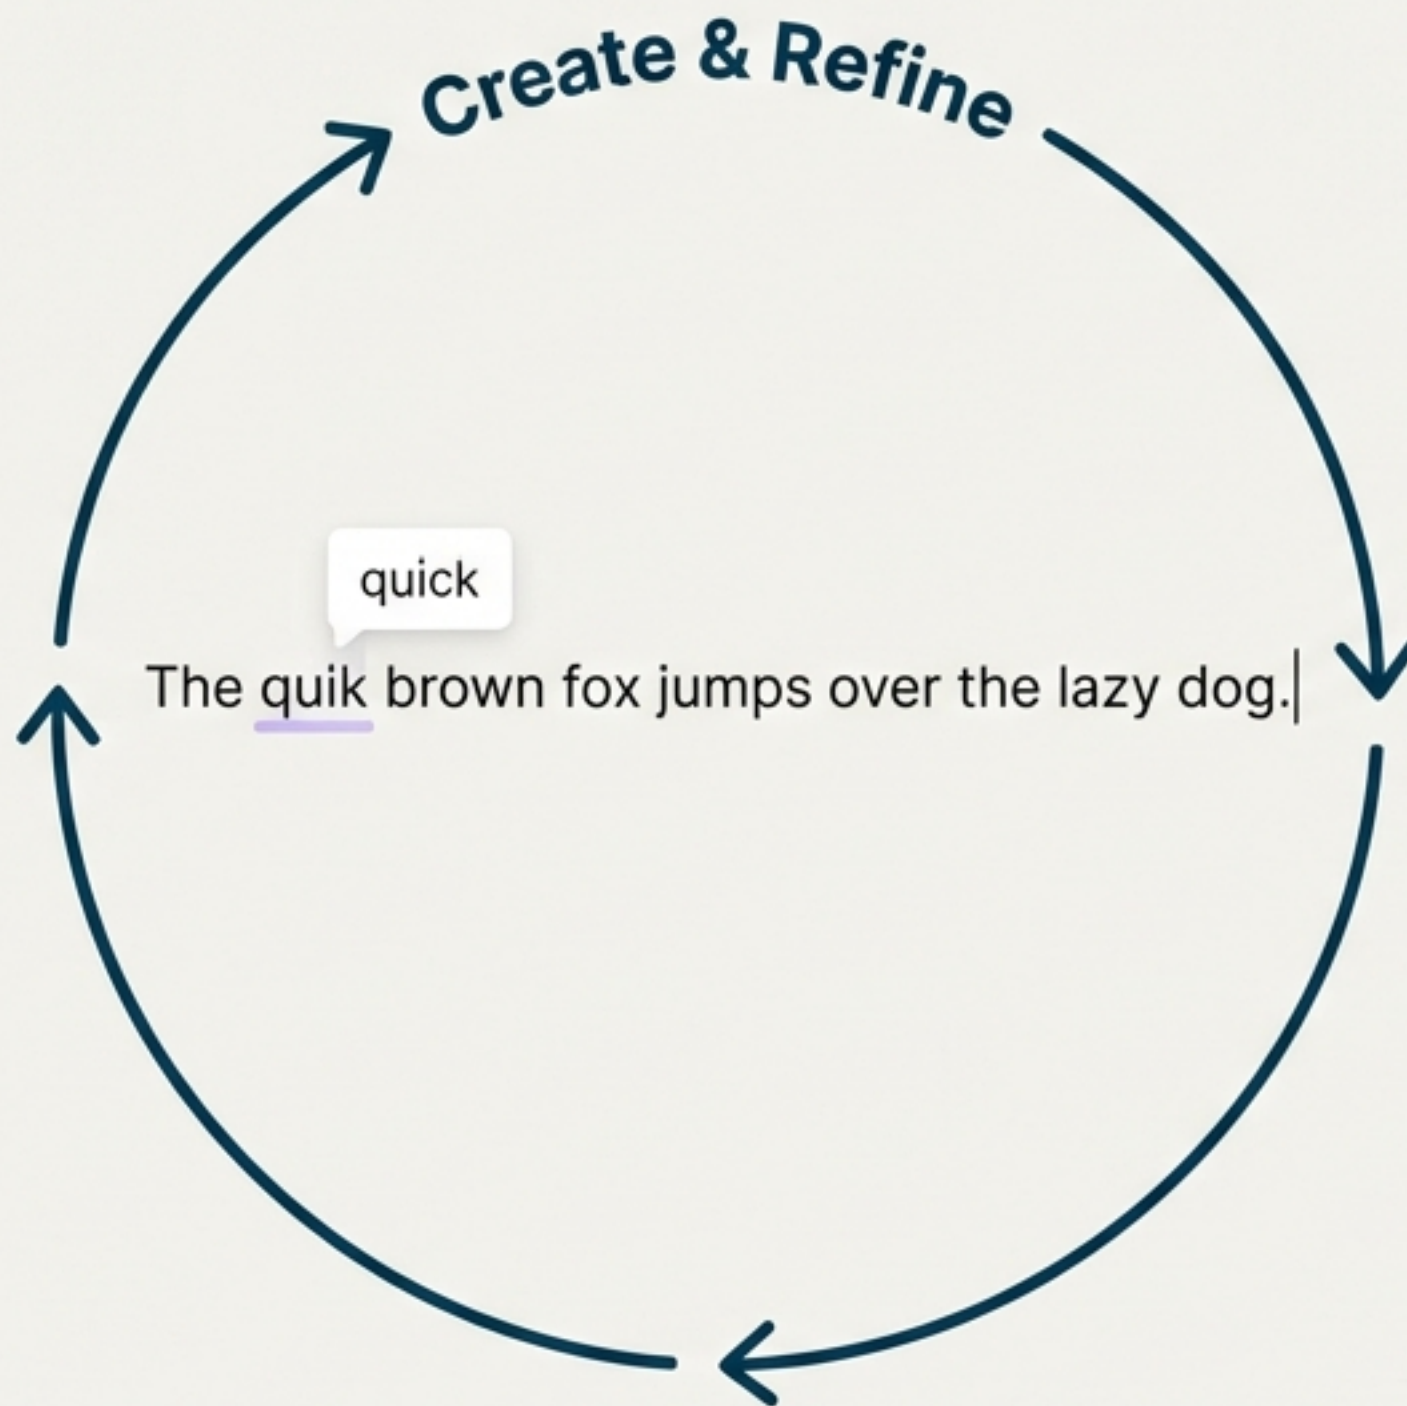

Meet Jessy, Content Writer

The Challenge: An inefficient proofreading workflow

Jessy is a content writer, checking the grammar of the content after creating the entire content. This separates the writing and editing phases, making revisions less efficient.

Creating with Confidence, in Real-Time.

Jessy started using the “Grammarly” extension.

The extension “checks the grammar and gives suggestions line after line while creating the content,” **merging the editing and writing processes into one seamless flow.**

The Pattern of Progress

Whether it's code, data, compliance, or content, the path to a better workflow is the same: identify the friction, find the right tool, and reclaim your focus.

Simi automated
element finding

Veera eliminated
manual data entry

Vikas gained instant
accessibility insights

Jessy integrated
real-time proofreading

Find the Extension for Your Workflow

A vast library of extensions is available to explore, built by a global community of developers. Your solution is likely just a few clicks away.
